STEM Education Abroad

Flexible Laboratory Facilities

cea capa EDUCATION ABROAD

Our STEM laboratories support hands-on learning across multiple disciplines and introductory to intermediate laboratory coursework. Modular environments can be adapted to meet course-specific academic objectives.

Locations Available

Barcelona | Dublin | Madrid

Why Partners Choose Our STEM Labs

Purpose-Built for STEM

Our labs were purpose-built with bench space, accessible power and data connections, water sources, optimized lighting, and specialized equipment designed for hands-on STEM learning.

Built for Safety

These spaces were intentionally designed with guidance from STEM faculty, architects, and laboratory instructors to incorporate safety practices, appropriate infrastructure, and local compliance standards.

Collaborative Program Design

Our STEM labs enable collaboration with partners to deliver and adapt high-demand courses in disciplines that are traditionally difficult to offer abroad, helping students stay on track for graduation while gaining a global experience.

Consistent Across Locations

Standardized facilities and procedures provide reliable learning environments across locations.

Example STEM Disciplines Supported

Our laboratory spaces can support a broad range of introductory and intermediate STEM coursework, in disciplines including:

- Biology & Life Sciences
- Environmental & Sustainability Studies
- Chemistry
- Biotechnology
- Physics & Engineering
- Research Methods & Data Analysis

STEM courses, laboratory activities, and customized applications can be developed to meet institutional needs.

Example Laboratory Activities

- DNA extraction & analysis
- Microscopy & specimen observation
- Cellular & molecular biology investigations
- Microbiology & microorganism culturing
- Blood typing, blood analysis, and immunology studies
- Electrical circuits & electromagnetism investigations
- Chemical reaction investigations
- Experimental design
- Data collection, analysis, & visualization
- Physics and mechanics experiments

Interested in customized STEM programming?

We welcome collaboration on curriculum design, laboratory requirements, and new course development. Start a conversation with your contact in Institutional Relations!
